

WHAT WE DO

Optimize

- Reduce recidivism by increasing access to opportunity
- Provide a scalable, replicable model for tech-based reentry support
- Create a bridge between underserved communities and the future of work

Empower

Returning citizens often face barriers to employment and reintegration. By introducing them to AI tools, we:

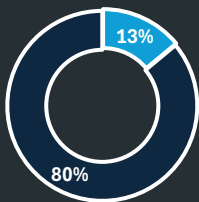

- Build confidence and digital literacy
- Open doors to new career paths
- Foster a mindset of innovation and self-sufficiency
- Graduates can be hired to mentor others – using their experience to guide & support peers

We **empower** others to harness the power of AI and equip participants with practical, **future-ready skills** to keep up with trends in the job market.

Our learning sessions introduce participants to the fundamentals of AI and how it can be used for:

- Daily life skills
- Job readiness
- Digital confidence
- Decision-making and stability

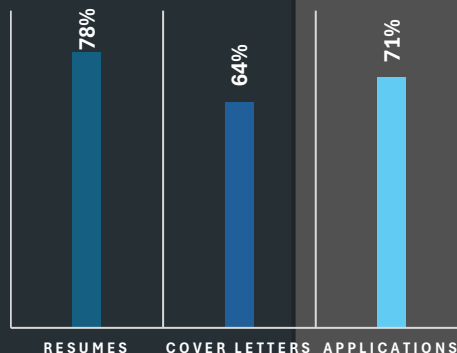

DIGITAL CONFIDENCE

■ Pre Digital Skills

■ Post Digital Skills

EMPLOYMENT READINESS
